# WEATHER OF CONCERN

## Weather of Concern

- There is no weather of concern.

## **Active Weather Warnings, Watches and Advisories by County:**

- <https://alerts-v2.weather.gov/counties/CA>

# **WEATHER SYNOPSIS BY REGION**

## **NORTHERN CALIFORNIA**

A few mountain rain showers are possible today. Rain will increase over the region tonight and continue into early Saturday. Snow levels will be 5000 ft. in the north and 7000 ft. in the south through tomorrow, then drop to 4000-6000 ft. Friday and 3000-5000 ft. Friday evening. SE-SW winds will gust to 20-30 mph tomorrow and 25-35 mph Friday.

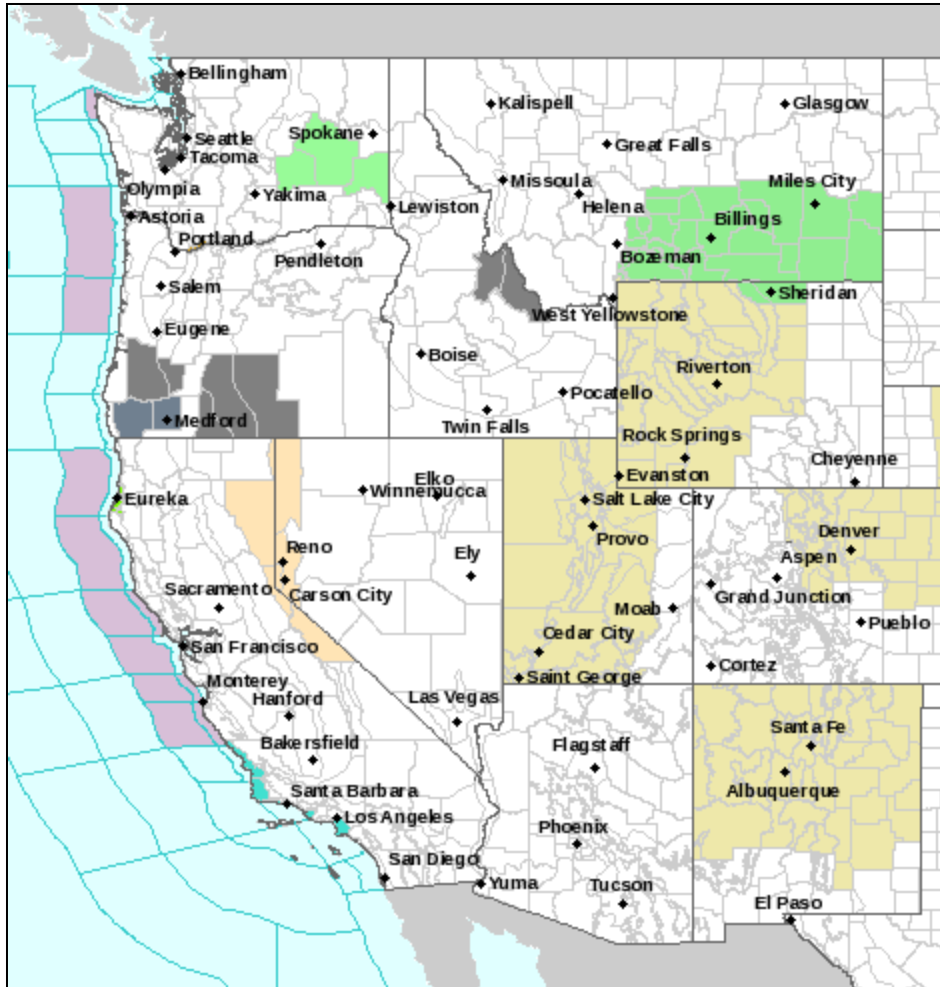

Late Saturday will be mostly dry, but another system will bring rain with high snow levels to northern areas Sunday into Monday and more wet weather will arrive during the middle of next week. Rainfall equivalent totals through early next week will range from near 0.50 inches in the driest inland valleys to 5 inches or more in the NW mountains. Other mountain areas will receive between 2 and 5 inches.

## **SOUTHERN CALIFORNIA**

The ridge of high pressure will weaken bringing a few degrees of cooling both today and tomorrow. Temperatures will be between 5 and 10 degrees above normal tomorrow through this weekend as the region remains under a weak ridge of high pressure. Humidity will start to increase today and will be fairly high tonight through this weekend. Abundant subtropical moisture will bring scattered light showers to Central California at times this evening through this weekend. Winds will be light through this weekend. A low pressure area may bring a better chance of some beneficial rainfall early next week.
